REAL-TIME MONITORING SOLUTION

SA Series Multi-Wave Probe

Real Tech's robust SA series submersible probe provides affordable real-time measurement of organic matter and other compounds in water or wastewater. Designed to meet the needs of many monitoring applications, the series offers multiple sensor path length selections for the desired measurement range.

Controllers and Accessories

Our innovative modular product platform allows a system to be configured around the ideal sensor with controller options and various accessory products, including compressed air cleaning systems that lower maintenance while improving system performance, and mounting kits for simple installation and operation. We can truly meet the physical demands of any installation to ensure reliable, continuous operation.

Real-time Actionable Data

With the right sensor and hardware configuration, we then build a custom calibration to monitor the aggregate organics parameter(s) or compounds of interest in real-time, accurately and reliably.

MEASUREMENT PRINCIPLE

The SA sensor utilizes light at various wavelengths, depending on the desired parameter(s) to be monitored. Many compounds absorb light in the UV-VIS spectrum. The absorbance of these compounds is directly proportional to their concentration. Compounds that may interfere with measurement, such as particles, are compensated for using additional reference wavelengths. The result is reliable, low-cost, real-time measurement for many parameters and compounds, including BOD, COD, TOC, DOC, UV254, UVT, TSS, colour, O₃.
